 WSJ: The Questionable Link Between Saturated Fat and Heart Disease (Google)

Take Social Security at 62

Analysis assumptions: Social Security at 62 will be \$23,076/year. Reduce IRA distributions by \$23,076/year at 62. Calculate added amount still in IRA (plus interest) at 70. Assume inflation & tax effects a wash (up to 85% of Social Security is taxed; I will probably be at max. Assuming 25% tax rate, just 3.75% difference). At 70, \$100,000 lifetime annuity pays \$725/month (\$8700/year)

http://www.cbsnews.com/8301-505146_162-51371076/7-best-annuities-to-guarantee-income-for-life/. Assume 5% IRA CAGR after inflation.

Calculations: My IRA has \$220,355.23 more in it at age 70 if I start Social Security distributions at 62. Buying a lifetime annuity with \$220,355.23 at 70 yields \$19,171/year till end of life. Adding the lifetime annuity to \$23,076/year from taking Social Security at 62 adds up to \$42,247/year, vs. getting \$41,364/year from Social Security alone at 70. Advantage after 70: \$42,247 - \$41,364 = \$883/year.

I ALWAYS have more – initially MUCH more – by starting SS distributions at 62
 Caveat – no lifetime annuity COLA, but I expect to do much better than 5% CAGR.
